

SinkTrack

Antonio Petrizzo

Abstract—It reads and elaborates ASCII file produced with FM Midwater in order to calculate some statistics, mean, standard deviation of backscatter, depth, angle of net for each ping, and to produce a graph with the track of the net

Index Terms—MarGnet, net, sinking velocity, water column, backscatter

I. INTRODUCTION

This document provides a paper-style view of the Research Object (RO) “SinkTrack”¹ generated . The RO has been created, managed and preserved via ROHub platform [1]. Please refer to [2] for a general introduction to the RO concept, to [3] for a detailed description of the RO model, and to [4] for more information about ROHub platform.

The RO is of type “Workflow-centric”, which represents an aggregation of related resources where scientific workflows play the central role. ².

Additionally, this RO has been enriched automatically with the following annotations:

- concepts (most frequently mentioned in the RO): *ASCII file, net, net*
- domains (fields of knowledge in which the main concepts are commonly used): *transports, statistics*
- frequent expressions (most frequently mentioned noun phrases): *elaborate ASCII file, angle of net*

ACKNOWLEDGMENT

The Research Object was uploaded to ROHub by *Antonio Petrizzo*. ROHub portal development was supported by EVEREST EU project (HORIZON 2020 grant 674907).
