

SinkVel

Antonio Petrizzo

Abstract—It calculates the sink velocity of a net floating in water starting from water column data.

Index Terms—MarGnet, net, sink velocity, water column, backscatter

I. INTRODUCTION

This document provides a paper-style view of the Research Object (RO) “SinkVel”¹, which is a *release* generated on 06 December 2019 from the live RO “SinkVel”². The ROs have been created, managed and preserved via ROHub platform [1]. Please refer to [2] for a general introduction to the RO concept, to [3] for a detailed description of the RO model, and to [4] for more information about ROHub platform.

The RO is of type “Workflow-centric”, which represents an aggregation of related resources where scientific workflows play the central role.³

An overview of this RO is depicted in Figure 1. Additionally, this RO has been enriched automatically with the following annotations:

- concepts (most frequently mentioned in the RO): *net, velocity*
- domains (fields of knowledge in which the main concepts are commonly used): *thermohydraulics*
- frequent expressions (most frequently mentioned noun phrases): *start from water column data, sink velocity of a net*

Note that the RO can be cited through its DOI [10.24424/ro-id.IKMY8URJ9Q](https://doi.org/10.24424/ro-id.IKMY8URJ9Q).

ACKNOWLEDGMENT

The Research Object was uploaded to ROHub by *Antonio Petrizzo*. ROHub portal development was supported by EVEREST EU project (HORIZON 2020 grant 674907).
